ES329 Heat Check Drag Simulation

Independent Testing Conducted by Link Testing Laboratories, Detroit, MI

The purpose of this test is determine how well a brake drum resists heat checking.

This is a test to failure analysis.

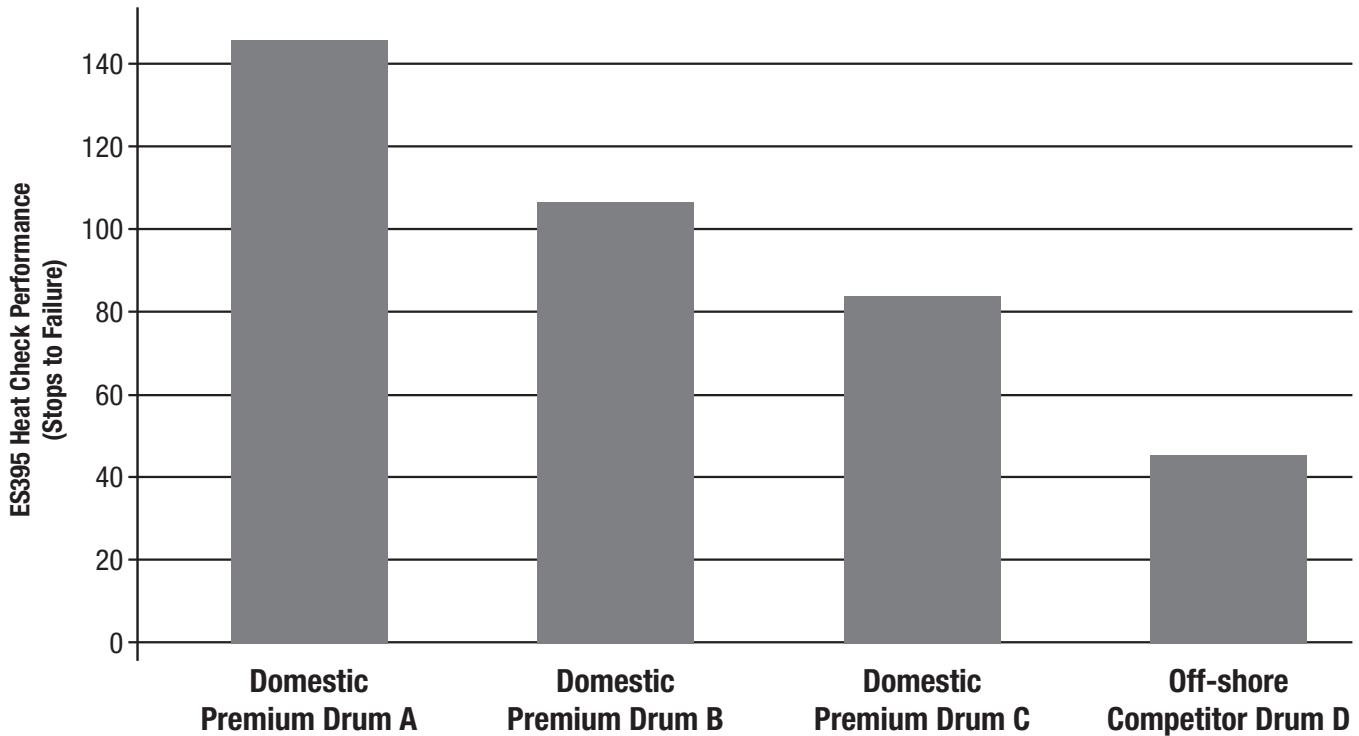

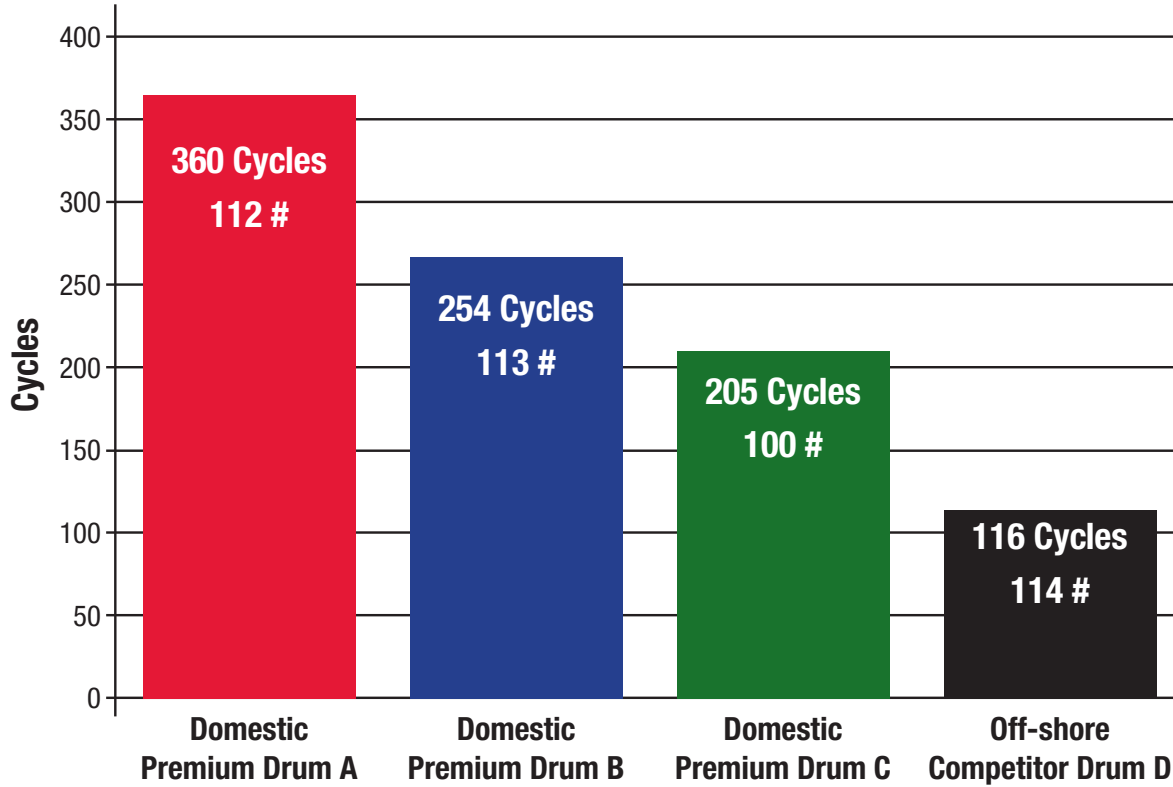

One cycle includes the following:

- Brake drum set at a constant 70 mph.
- Apply a 15 psi brake application for 60 seconds (avg. temp 450 degrees).
- Brake released, allowed to cool to 150 degrees.
- Apply a 15 psi brake application for 60 seconds (avg. temp 450 degrees).
- Brake released, allowed to cool to 150 degrees.
- Apply a 15 psi brake application for 60 seconds (avg. temp 450 degrees).
- Brake released, allowed to cool to 150 degrees.
- Dynamometer brings drum to complete stop.
- Apply 100 psi static brake application.
